

DESCRIPTION

CineWhite® (Tension Matte White) has broad light dispersion through diffusion uniformity, black & white contrast and true color rendition making it the most versatile in Elite Screens' tension screen product lines. This tension PVC surface is the best choice for today's high-contrast ratio projectors in commercial or residential presentations. The CineWhite® material equals the performance to our MaxWhite® product, but improves the experience with the superior surface flatness. Uniform diffusion surface has black-backing to eliminate light penetration and is easily washable with mild soap and water.

MATERIAL SPECIFICATIONS

- Multi-layer PVC (Polyvinyl chloride) with texture and surface coating
- CineWhite material has a Gain of 1.1
- View Angle: 180° (90° ±LR)
